Plates

6640014618409 OPTIPLATE-96 BLACK, BLACK OPAQL EACH Retail: \$76.56

OPTIPLATE-96 BLACK, BLACK OPAQUE 96-WELL MICROPLATE.

The black OptiPlate-96 F is manufactured from high-quality, black plastic resin, which reduces auto-flourescence and results in low background signals. The plate is ideal for TR-FRET (LANCE) assays. The black microplate can also be used for high-signal luminescent assays to reduce unwanted crosstalk. The pinch bar design of the OptiPlate-96 F facilitates automated processing by robotized systems and the ribbed underside improves trouble-free stacker operation. PerkinElmer microplates are produced under clean room conditions to reduce dust or other contaminants. Bar coded black microplates are also available.

Features and benefits: excellent counting characteristics in flourescence assays, low autoflourescence, ribbed underside to avoid stacker jams, footprint conforms to proposed industry standard (SBS), pinch bar design for optimal robotic processing.

Typical applications: Homogeneous Time-Resolved Flourescence (HTRF), other TRF assay types, Flourescent ELISA, High-signal luminescent assays.
